"In malignant striped-cell Sarcoma of the Bladder in a 12-1/2 year Old boy."

Krakow-Krakow, Przegląd Lekarski. Vol. 19, Ser II, No 1, 1961, pp 19-21.

Abstract: Authors describe a case of malignant striped-cell sarcoma of the bladder which showed promising results on treatment (surgical removal of formation, application of antibiotics, and introduction of tube), which could unfortunately not be pursued since parents took the child home. Of the 24 references, one (1) is in German, about five (5) in Polish, and the rest in English.

The sulfatase of clarsae: inhibition, inactivation, and purification. L. M. Dzialoszynski (Univ., Poznan, Poland). *Nature* 166, 167-8 (1950); cf. C.A. 42, 1616d. Sulfatase of clarsae (I) activity was detd. by colorimetry of the PhOH liberated by I hydrolysis of a PhO-SO₂OK substrate (II) (cf. King and Armstrong, C.A. 28, 7245'). Activity of I on II is inhibited thus; for the following inhibitors the mol. concn. (M) and % inhibition are, resp.: PhNHNH₂, 10⁻⁴, 25; PhNHNH₂, 10⁻³, 100; NaCN 10⁻⁴, 100; AgNO₃, 10⁻⁴, 100; H₂NCONHNH₂, 10⁻⁴, 77; Pb(OAc)₂, 10⁻³, 44; K₂HPO₄, 10⁻³, 25; BaCl₂, 10⁻³, 0; EtOH 10⁻¹, 0; Sr(NO₃)₂, 10⁻³, 0. At pH 3, I was irreversibly inactivated; 80% in 5 min. and 100% in 10 min. Half-min. of aq I with (NH₄)₂SO₄ pptd. an inactive fraction, leaving a supernatant richer in I.

11H

Phenoloxidase. I. Optimum conditions and influence of media on activity. L. M. Deichmeyer (Univ. Poznan, Poland). *Bull. soc. chim. bel. lettres* Poznan B11, 83-79 (1961) (in English).—Clarase, an enzymic prep. produced by Takamine Labs., New York, was used as the source of enzyme, its activity being detd. by gravimetric estn. of sulfate liberated during hydrolysis. The substrate was PhOSO_3K which showed a max. spontaneous decompn. of 2% during a 6-day period over the pH range 5.9 to 7.0. The pH of optimum activity for the enzyme prep. was 5.85-6.0. For a 24-hr. reaction time, the temp. for optimum activity was 37°. Enzyme activity was studied in phosphate, acetate, and B.D.H. universal buffers with phosphate buffers showing the highest activity. Universal buffer seemed to exert a considerable inhibitory effect on the hydrolysis. A direct proportionality between percentage of hydrolysis and time existed for a ratio of concns. of substrate: enzyme of 1:8. Comparison of the activity of phenoloxidase at identical ratios of concns. of substrate to enzyme in horse urine, in human urine, and in phosphate buffer indicated that something in the urine inhibited the hydrolysis, human urine doing so to a slightly lesser degree. The nearer the ratio of substrate concn.: enzyme concn. was to the optimum, the less marked was the inhibition caused by the urine, i.e., when the ratio was 1:1 the inhibition was 73%; when the ratio was 1:0.5 it was only 18%. Urea was shown to cause inhibition of the enzyme activity at concns. comparable to those present in the urine samples. II. Action on aromatic and hydroaromatic esters of sulfuric acid. *Ibid.* 80-6.—The procedure described above was adopted for the estn. of enzyme activity. About 35% of both α -

and β - $\text{C}_6\text{H}_4\text{OSO}_3\text{K}$ was hydrolyzed in 24 hrs. by a clarase prep. Within 5 days, the enzyme hydrolyzed 93% of PhOSO_3K compared to 69% of 3,5-(Me) $_2\text{C}_6\text{H}_3\text{OSO}_3\text{K}$. Potassium cyclohexyl sulfate was not hydrolyzed. III. A new method for the estimation of phenoloxidase activity, inhibition, inactivation, fractional precipitation. *Ibid.* 87-90; cf. C.A. 44, 9903c.—The mol. concn. (M) and percentage inhibition, resp., for the following inhibitors added to the previously published list are: AgNO_3 , 10^{-4} , 66; NaCN , 10^{-4} , 10; NH_4OH , 10^{-4} , 7; NH_4OH , 10^{-4} , 63; H_2NCONH_2 , 10^{-4} , 8; $\text{Pb}(\text{NO}_3)_2$, 10^{-4} , 44; $\text{Pb}(\text{NO}_3)_2$, 10^{-4} , 59; KCl , PO_4 , 10^{-4} , and AcONa , 10^{-4} , 0. 4-oxy-3, 4, 5- triphenylcyclohexane-2-on-1(I) was synthesized by condensation of 10.6 gr benzene and 14.6 gr benzylideneacetone in 150 ml of absolute alcohol with the addition of 0.5 gr KCN in 2 ml water (heating), yielding approx. 40%, melting point of 246-249°; analogically it was possible to carry on the reaction in the presence of KOH, with the yield of 46%. In the reaction of 17 gr I and 35 gr $(CH_3CO)_2O$ in the presence of 0.5 gr of anhydrous $LiCl_2$ (boiling for 30 minutes) 3, 4, 5-triphenylphenylacetate (II) [sic] was obtained at a yield of 91% and of 190-191° melting point (from glacial CH_3COOH). The saponification of 18.2 gr II, 6 gr KOH in 90 ml alcohol (98%

yield) of 3, 4, 5- triphenylphenol (III) with 229-230° melting point (from glacial CH_3COOH). Methyl ester of III was derived in the reaction of III and CH_3N_2 in the ether solution (120 hours), yield was 96%, melting point 122.5-123.5° (from alcohol). Ethyl ester of III was synthesized in the reaction involving 3 gr III, 3 gr $\text{C}_2\text{H}_5\text{I}$ and 0.5 gr KOH in 20 ml of alcohol (boiling 2 hours), resulting in the 81% yield and having 110-111° melting point; likewise in the analogical reaction with $\text{C}_2\text{H}_5\text{Br}$ the yield was 61%. 3, 4, 5-triphenylchlorbenzene (IV) was synthesized by two methods: by the reaction of 3.2 gr III and 2.1 gr PCl_5 (CO_2 , 160-165°,

Przegląd elektrotech., Vol. 31, No. 1, 447-55 (1955). In
Polish.

EE It is shown that equations governing the water flow in a river are analogous to those of a long transmission line. An electrical network having characteristics of a long transmission line may be thus used in investigations of river flow under steady-state and transient conditions. Details of parameter conversions are given. Such electrical models can be applied, with any desired degree of accuracy, to investigations of flood water flow, effects of storage areas, tides, variations in water levels and to determine conditions for optimum utilization of a river for power purposes.

4625. ORGANIZATION AND AIMS OF HUNGARIAN PEAT RESEARCH INSTITUTE. Dzida, J. (Banyasz. Kohasz. Lapok. k949, vol. 82, 107-110; abstr. in chem. abstr., 1949, vol. 43, 9413). Informative data were obtained by investigating samples obtained from 10,000 borings on 9 different peat deposits in Hungary. The deposits of peat are estimated to be equal to the heating value of 80 million metric tons of coal of 4,000 cal. Methods must be found to make peat production cheaper since present cost is above that of coal. Coking experiments are underway and field experiments were introduced to test the availability of a peat preparation as humus substitute in cultivated soils.

"Comparison of Geriocrine and Placebo Results in Healthy Old People"

Warsaw, Polski Tygodnik Lekarski, Vol XVIII, No 8, 18 Feb 1963, pp 287-291

Abstract: [Authors' English summary modified] Results of geriocrine and placebo administration for a month to healthy
[1/2]

POLAND

Warsaw, Polski Tygodnik Lekarski, Vol XVIII, No 8, 18 Feb
1963, pp 287-291 (continued)

old people were evaluated by a group of physicians who were unaware of the kind of drug administered to each patient. No effects on the mental or physical conditions of the patients different from those of placebo administration could be detected in the geriocaine group.

The results of this study do not eliminate the possibility of some effect of geriocaine if administered for a longer period. The evaluation of such effect would be, however, reliable only if compared with a proper control group. 6 tables; 2 diagrams; 11 references, mostly Eastern.

TITLE: The Performance Characteristics of Fans Working in Parallel in That Range of the Performance Curve Where More Than One Discharge Volumes Are Possible at a Given Pressure (Kharakter raboty parallel'no vklyuchennykh ventilyatorov pri mnogoznachnom rezhime)

PERIODICAL: Tr. In-ta metalla i gorn. dela AN GruzSSR, 1954, Vol 6, pp 165-180

ABSTRACT: Test results are given for experiments performed on a bank of four ducted axial-flow fans working in parallel. Deductions are made to the effect that the operation of the fans is basically stable but depends upon the switching-on sequence of the fans.

(Nekotoryye voprosy posledovatel'noy raboty shakhtnykh ventilyatorov)

PERIODICAL: Tr. Gruz. politekhn. in-ta, 1954, Nr 32, pp 109-122

ABSTRACT: An analysis of the comparative effectiveness of various mine-ventilator arrangements. The greatest stability of operation and highest efficiency is afforded by an arrangement which permits switching the ventilators to individual, in-series, and parallel operation depending on changes in the equivalent opening of the mine shaft and the resistance offered by the ventilation-flow route. Bibliography: 3 references.

AUTHOR: Dzidziguri, A.A.

TITLE: The Critical Rpm of a Fan Operating in Parallel (Predel'noye chislo oborotov ventilyatorov pri parallel'noy rabote)

PERIODICAL: Tr. In-ta metalla i gorn. dela AN GruzSSR, 1956, Vol 7, pp 251-260

ABSTRACT: It is established that the "critical" rpm of a fan operating in parallel, found on the basis of V.S. Pak's formulas (Ventilirovaniye shakht parallel'no vklyuchennymi ventilyatorami. Ugletekhizdat, 1947), is not the only determinant. For example, in fans having saddle-shaped or otherwise curved pressure characteristics, the computed values of the critical rpm are greater than those allowed by the condition of single-valuedness of their operation. In this connection the Author, referring to his previously published work (Dzidziguri, A.A., and Muskhelishvili, V.L., Tr. Gruz. politekhn. in-ta, 1952, Nr 24), derives relationships for the determination of the critical rpm of fans, specifying the absence of any multi-valued regimen in their joint operation (particularly with reference to discontinuous pressure characteristics of fans). The following

Card 1/2

124-1957-2-1781

The Critical Rpm of a Fan Operating in Parallel

conclusions are noted: 1) If the maximum rpm determined from the requirement of single-valuedness is greater than the maximum number of revolutions specified by other conditions, it will be necessary to take the smallest value; 2) If the minimum number of revolutions determined from the condition of single-valuedness is greater than the maximum number of revolutions determined from other conditions, then the fan is not suitable for use in the given conditions. As an example for the evaluation of the critical rpm, the parallel operation of two axial two-stage TsAGI fans, series "B", was subjected to examination.

Ushakov, Konstantin Andreyevich, Professor, Iosif Veniamenovich Brusilovskiy, and Aleksandr Romanovich Bushel'

Aerodinamika osevykh ventilyatorov i elementy ikh konstruktsey (Aerodynamics of Axial-Flow Fans and Elements of Their Structure) Moscow, Gosgortekhnizdat, 1960. 421 p. Errata slip inserted. 2,000 copies printed.

Ed.: Konstantin Andreyevich Ushakov, Professor; Ed. of Publishing House: G.B. D'yakova; Tech. Eds.: S.Ya. Shklyar, and Z.A. Korovenkova.

PURPOSE: This book is intended for workers of scientific research institutes and planning and design institutes of the ore-mining industry, and may be used by the personnel of other organizations concerned with the design and operation of axial-flow fans.

COVERAGE: The authors describe a modern method of the aerodynamic calculation of axial-flow fans and critically review the design of mine-ventilating machines. Their method of profiling bladed rings is said to be a synthesis of the theory of two-dimensional cascades of airfoils, testing data, and of the generalized results of various systematic experimental investigations carried out by the

The role of mechanical stimulation of intestinal afferent nerve endings was investigated by means of an intestinal loop exteriorized within a cutaneous flap. Movements of the bowel were plethysmographically recorded together with gastric motility. Spontaneous periodic motor activity of stomach and bowel is synchronized. Stimulation of the intestinal loop (balloon inflation) produced contractions within the stimulated intestinal segment only, but with increasing intensity of stimulation, motor activity spreads to adjacent segments. The force of intestinal and gastric contractions depends on the intensity of local stimulation of stretch receptors.

Simonson - Minneapolis, Minn.
